

UNLOCK THE POTENTIAL OF CONNECTED VEHICLES

Imagine a world where your vehicle anticipates your every need, delivering tailored services to you in an instant. Experience the seamless integration of third-party digital services directly into your vehicle,

elevating your driving experience to new heights. With AiDEN, the ultimate in-car convenience is at your fingertips.

THE CHALLENGES OF AUTOMOTIVE CONNECTIVITY

OEMs face a variety of challenges when it comes to vehicle connectivity, from fragmented ecosystems and lack of standardization to limited data collection and compliance with privacy regulations.

AIDEN: ONE SCALABLE SERVICE HUB FOR ALL POTENTIAL SERVICES

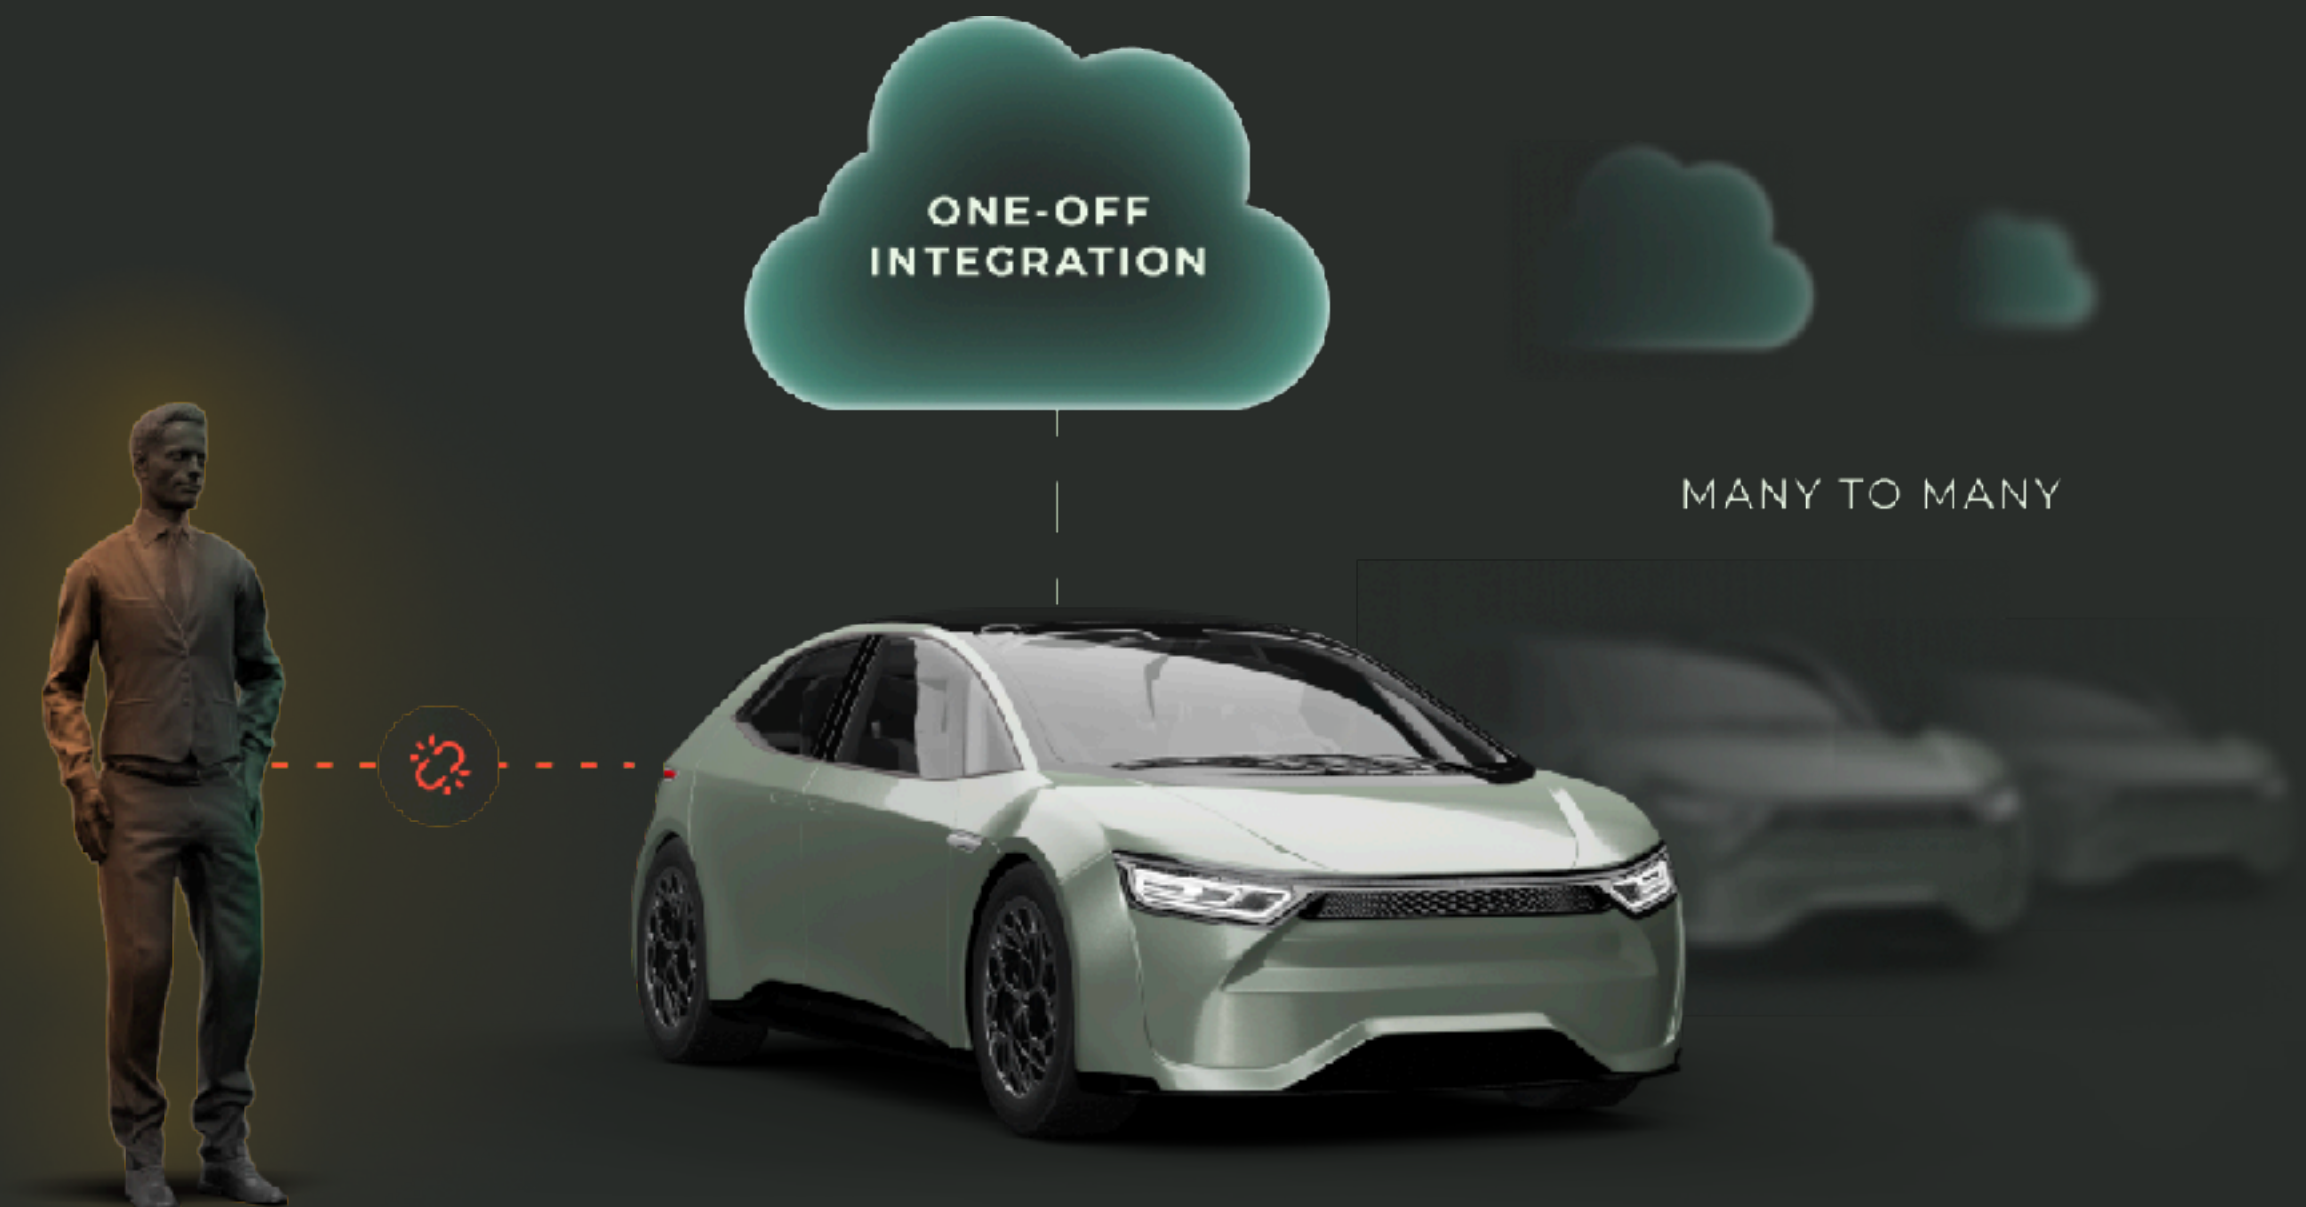

Our Service Hub offers real-time communication, ensures privacy compliance, and eliminates costly integrations. It enables infinite digital services and unlocks the potential of connected cars to provide

personalized experiences for fleet owners and drivers. AiDENs off-the-shelf software eliminates the need for complex coding or third party apps.

THE CHALLENGES OF LIMITED ACCESS TO DATA

To scale up effectively, Service Partners must be able to manage multiple integrations efficiently, ensure interoperability and standardization, and balance the costs and benefits of growth in a complex and rapidly evolving market.

AIDEN: CONFIGURABLE REAL-TIME LIVE DATA STREAMING

Ready for scalability: AiDEN Service Hub provides access to over 160 data sets of personalized and standardized vehicle data in real-time, improving the

quality and customization of services across OEM brands.

THE SOLUTION

AiDEN utilizes a single software running on Android Automotive OS installed in the vehicle, standardizing data and communication.

This results in a consistent set of normalized data.

Our innovative off-the-shelf software, takes minutes to install and enables infinitive services in the vehicle providing contextual and tailored user experiences.

TAILORED USER EXPERIENCE

Introducing the first white label and bidirectional service hub for the automotive industry.

Our software-only solution streams real-time services across multiple vehicle brands, providing a simple and intuitive experience for vehicle owners, fleet owners, and drivers.

With 100% GDPR and CCPA compliance, AiDEN's consent management feature ensures improved and personalized features and experiences, all while maintaining the highest level of privacy protection.

IN CONCLUSION

AiDEN offers a simple, no-code/low-code solution that is quick and easy to install, with an intuitive HUB for OEMs to manage partners and service offerings, resulting in a tailored and personalized user experience.

Effortless Set-Up

AiDEN offers a software-only solution that streamlines real-time services across multiple vehicle brands. The installation process is quick and easy, taking just minutes to complete. The Android Automotive OS-based software can be installed in the vehicle, standardizing data and communication and resulting in a consistent set of normalized data.

NO-Code/Low-Code

AiDEN's innovative off-the-shelf software eliminates the need for complex coding or expensive third-party in-vehicle apps. Service partners have the flexibility to choose specific signals, set the frequency of data, and create triggers, all without complex coding.

Easy Hub to Manage Partners

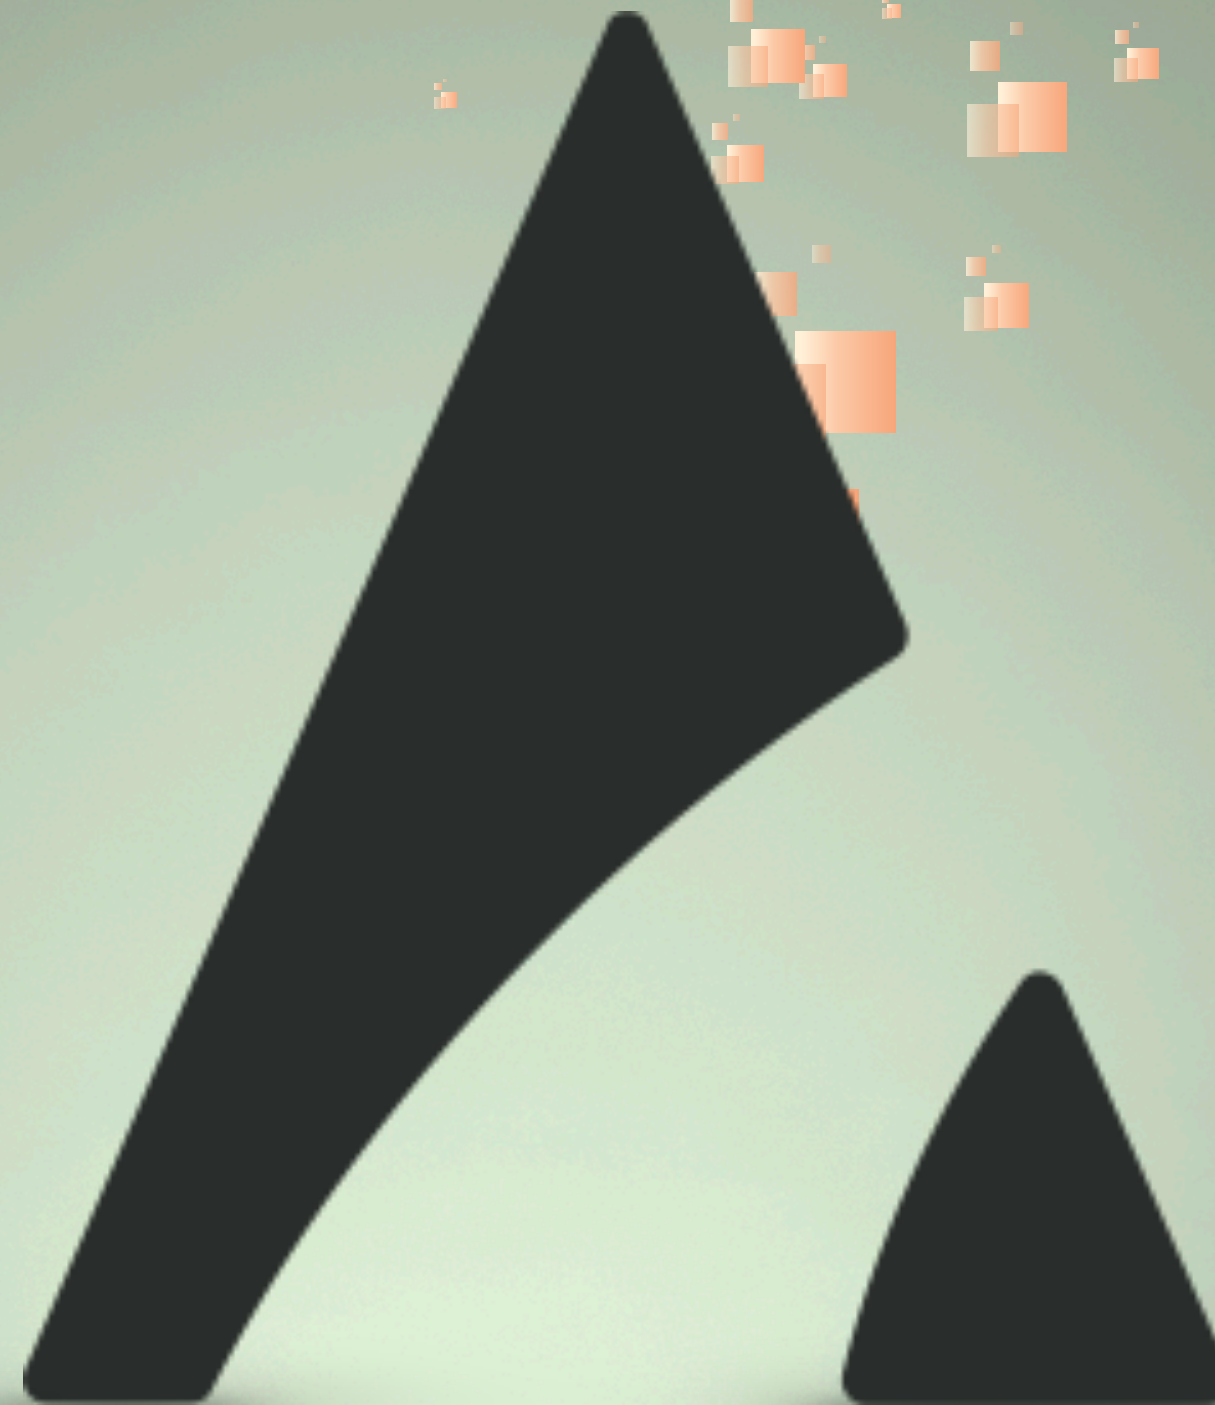

OEMs have complete access and control over managing, monitoring, and monetizing services in real-time with the AiDEN HUB. The HUB enables OEMs to dynamically manage services and data, choose which services to connect with their vehicles, and specify which services are offered in specific vehicles by VIN number.

Service Partner Offerings

Service partners have the ability to launch and operate web apps to communicate directly with the driver through AiDEN's user interface pipeline. The data and connection between the driver and service partner will only start once it is selected by the driver, providing a tailored user experience.
